Dear Hiring Manager,

I am writing to express my interest in opportunities in Electrical Engineering, Embedded Systems, and Hardware Design. I am currently completing my Bachelor's degree in Electrical Engineering, graduating in December 2025, and have developed a strong foundation in circuit design, embedded development, and system-level engineering through coursework, independent projects, and hands-on experimentation.

My engineering experience spans microcontroller-based systems (ESP32, STM32, Raspberry Pi), hardware interfacing, signal processing, and digital logic design. I have designed and implemented complete systems that integrate sensors, communication protocols, and real-time data processing. Some examples include developing a multi sensor search and rescue robot using ESP32 and Raspberry Pi 5 for real-time video, MQTT telemetry, and dashboard visualization, as well as building custom hardware interfaces and firmware for ADCs, microphones, and wireless modules. Additionally, I have experience with HDL development, including creating and testing custom digital logic and CPU components using VHDL.

My background in both hardware and embedded software allows me to contribute effectively across the entire development cycle, whether it involves designing circuits, writing firmware, or troubleshooting mixed-signal systems.

What sets me apart is my ability to take ownership of projects, learn quickly, and adapt to new tools and challenges. I enjoy working in technical environments where I can contribute to real world engineering problems and collaborate with others who are passionate about building reliable and innovative systems.

I would welcome the opportunity to contribute to your team and further develop my skills in a professional engineering environment. Thank you for considering my application. I look forward to the possibility of discussing how my experience and interests align with your needs.

Sincerely,
Tomide Abidakun
